EDUCATION

Stevens Institute of Technology

Expected May 2026

Bachelor of Science in Computer Science, Minor in Mathematics, GPA: 3.8

Hoboken, NJ

- **Awards:** National Cyber Scholar 2021, Dean's List, 2024 Chevron SASE Scholarship
- **Leadership:** Japanese Student Association President, CSI Head, Student Government Association Senator
- **Coursework:** Web Programming, Data Structures, Algorithms, Agile Methods, Deep Learning, Artificial Intelligence, Database Management Systems, Systems Programming, Mobile Systems and Applications, Computer Architecture

SKILLS

Languages: TypeScript, JavaScript, Python, C++, C, C#, Java, SQL, OCaml, HTML/CSS, Bash, ARM Assembly

Frameworks: Next.js, Expo, React, React Native, Node.js, Express.js, Flask, Tailwind, AJAX

Tools: MongoDB, Supabase, Convex, Firebase, Amazon Web Services, Vercel, Handlebars, Git, LaTeX, OpenAI, GroqAI, LangChain, JQuery, Linux, Clerk, Stripe, numpy, matplotlib, pandas, MaterialUI, Shadcn, DaisyUI

Concepts: Full Stack, Software Development, Machine Learning, Debugging, Unit Testing, Performance Software

EXPERIENCE

Mobile Engineering Intern

Jan 2025 – Present

Vaccone Software Company

St. Petersburg, FL

- Designed **mobile UI** components of volunteer events display in **React Native** with **Expo**, reducing user drop-off during event browsing by **25%** through streamlined and responsive interface design
- Reduced data load time by **30%** and improved backend-to-frontend integration by developing **API** functions to retrieve charity details by volunteer event ID

Software Engineering Intern

Jun 2025 – Aug 2025

Alea Partners

New York, NY

- Engineered core features for a next-gen STEM learning app that gamifies math education targeting **700M+** children globally, using **TypeScript**, **React Native**, **Expo**, and **Convex**
- Implemented **5 game modes** to enhance math skill development through interactive abacus gameplay, improving user engagement and learning variety

Software Engineering Intern

Jun 2024 – Dec 2024

Vaccone Software Company

St. Petersburg, FL

- Decreased query time by **40%** by establishing an efficient event and volunteer filtering system using **RPC** and **PostgreSQL**, improving the user experience for volunteers searching by location, time, interest area
- Boosted performance by **35%** by overhauling a large legacy codebase using **Next.js** and **React**, enabling charities to seamlessly register and post volunteer event

Undergraduate Researcher

May 2023 – Aug 2023

Laboratory for Intelligent Integrated Networks of Engineering Systems

New York, NY

- Improved data collection by **60%** by coding a **Python** web scraper with **EIA API**, extracting **20,000+** data sets
- Increased **liines.net** visits by implementing **50+** LinkedIn profiles to LIINES affiliate page, improving SEO
- Cut production time by **98%** by automating graph generation using **Python** and **Matplotlib**

PROJECTS

StampNotes | *JavaScript, CSS, HTML, Chrome API*

- Launched a Google Chrome Extension that enhances YouTube functionality by allowing users to create, edit, and delete, annotated notes on video timestamps, improving the learning experience for **100+** users
- Enabled users to save up to **100KB** of text by implementing cloud storage by leveraging **Chrome API**

Rocket Trajectory Simulator | *C++, Python, Matplotlib*

- Published an open-source physics-based **C++** simulation engine modeling rocket trajectory using Euler Integration
- Generated **1,000+** time-step flight data points per run with configurable parameters
- Developed **Python** modules for trajectory plotting and **real-time** performance analysis using **Matplotlib**

Digi-Drobe | *Express, Node.js, AJAX, JQuery, MongoDB, AWS, Handlebars, JavaScript*

- Pioneered a full stack web application facilitating outfit uploads, streamlining outfit creation processes for users
- Managed a database with over **1000+** entries by programming a backend storage utilizing **MongoDB**
